EXPERIMENT - 0

AIM:

To understand data handling, visualization, and exploratory data analysis using NumPy, Pandas, Matplotlib, and Seaborn for Machine Learning applications on the [expanded_student_performance.csv]

OUTPUT SCREENSHOTS :

Loading the dataset

```
First 5 rows:
   Hours_Studied  Attendance  Assignment_Score  Midterm_Score  Final_Score
0              1        60.0              55.0           50.0           52
1              2        65.0              58.0           55.0           57
2              3        70.0              60.0           58.0           60
3              4        75.0              65.0           62.0           64
4              5        80.0              68.0           65.0           68

Dataset Shape: (100, 5)

Missing Values:
 Hours_Studied        0
Attendance           11
Assignment_Score     12
Midterm_Score        19
Final_Score           0
dtype: int64
